

Application for .si domain name registration software testing

This application is intended for future registrars. We shall accept the signed and stamped applications e-mailed to registry@registry.si. Upon receiving the application, we shall send a username and a password and allow access to test server from IP addresses listed herein.

Testing will take place in an environment that resembles real-world transactions, which means that registry will monitor transactions and as test server actually sends e-mail notifications to e-mail addresses you enter in the database, we remind you to use only your own e-mails.

By signing this application, you guarantee that all the information is true and you are familiar with the conditions of software testing, otherwise we will immediately reject your application and deny access to the test server.

If you experience any problems with the software, please contact registry@registry.si.

Information about the future registrar

Company name:

Street name and no.:

City, post code:

Country:

Identification no:

Contact person:

Telephone no.:

E-mail:

Web address (for domains):

IP address:

IP address:

IP address:

IP address:

User data
